

CHIRP - Bug # 1373

| | | | |
|--|---|------------------|-------------------|
| Status: | Closed | Priority: | Normal |
| Author: | Eric Senf | Category: | |
| Created: | 01/15/2014 | Assignee: | |
| Updated: | 02/23/2020 | Due date: | |
| Chirp Version: | daily | | |
| Model affected: | Yaesu VX-8DR | | |
| Platform: | MacOS | | |
| Subject: | Error when downloading from VX-8DR on Mac | | |
| Description | | | |
| <p>Whenever I try and download from my new VX-8DR (which has local repeaters programmed from a PC by a friend) I get an error stating:</p> <p>Failed to communicate with the radio: Received incomplete image from radio</p> <p>The radio goes through TX without error, but with just a bit of progress bar left in CHIRP, it stalls and produces the error. I am using OS X 10.9.1 and using the Kawamall USB cable with the most current Prolific USB-Serial driver.</p> <p>Please let me know if there is further troubleshooting or help I can provide.</p> | | | |

History

#1 - 02/23/2020 06:10 pm - Bernhard Hailer

- Status changed from New to Closed
- Target version set to chirp-daily
- Model affected changed from (All models) to Yaesu VX-8DR

This has probably been resolved along with #1473.
Please re-open in case there are still issues.
