Chirp Version:	0.4.0		
Model affected:	Baofeng UV-5R		
Platform:	MacOS		
Subject:	How can i adjust radio type ?		

Description

Hello,

today i was creating new channel list from beginning. after entering 300 channels to list i noticed that it wasn't for baofeng uv5r.its in d-star mode and i can't change to baofeng and its a death to re enter 300 channels again.
is there any solution for that ?

Download from the UV-5R to create a second tab that is compatible with the radio. Then you can copy and paste up to 128 of the 300 channels from the first tab to the second tab (the UV-5R only has 128 memory channels). Then you can upload the second tab to your UV-5R.
