Hi Thomas,

The BF-F9 V2 is a radio with three power levels that was originally released less than a year ago. The CHIRP v0.4.x stable build is nearly a year and a half old and does not support any Baofeng radios with 3 power levels.

See the "Supported Radio Models" list on the [CHIRP home/wiki](#) page.

- BF-F8HP (*in daily builds*) <-- this is model to select and the CHIRP version to use

Also includes the BF-A58

Also includes the BF-F9V2+ <-- this is your radio

Also includes the GT-3TP

Also includes the UV-5RTP

Also includes the UV-5R7W

You must use a recent [CHIRP daily build](#) to have support for your radio. You must select the "BF-F8HP" model when downloading.

Thomas,

Glad you got things sorted out.
