I have no idea what you're asking. Maybe you can find someone who is better at English to help you edit your question.

Hello

I have a question regarding Chirp in conjunction with Kenwood TK760G (-1 sound on the radio sticker)

Look at the photos ..

The Kenwood TK760G (-1) have been produced for the European market, so they are also programmed with the RSS KPG67d and not as the

American with the RSS KPG56d!

My question is I can persuade these European 760er radios to co-work with CHip ??

If I am in the Chirp program "download of radio" make with the parameters comport, radio, model .. then arrives instead of an error message (Rather than cloning) to Error has occurred - radio refuse to enter into program mode after a few tries.

And with the parameters com1, kenwood, tk760G - an error has occurred.

So what can I continue to do?

Knows anybody how he can help me?

Furthermore, I have a Kenwood TK7160 (-E) but this is not listed there, yes it is also a European model ...

greetings mark

- Status changed from Rejected to Feedback
- Target version changed from 0.5.0 to chirp-daily
- Chirp Version changed from 0.4.0 to daily

Das ist eine legitime Frage, daher oeffne ich dieses Ticket wieder.

Mark: Europaeische Modelle sollten ohne weiteres funktionieren. Falls nicht, dann ist das aber einfach zu reparieren.

This is a legitimate question, so I'm reopening it.

Mark: the European models should work fine; if they don't, then usually it's easy to fix.
