

CHIRP - Bug # 4883

Status:	Resolved	Priority:	Normal
Author:	Keith Williamson	Category:	
Created:	06/05/2017	Assignee:	Keith Williamson
Updated:	06/09/2017	Due date:	
Chirp Version:	0.4.0		
Model affected:	(All models)		
Platform:	Linux		
Subject:	Download from VX-8R radio causes traceback errors in console and blank Settings tab to be generated in UI		
Description	<p>If you download from a stock VX-8R radio using the Yaesu/VX-8 radio selection, the VX8DRadio class functions are executed instead of the VX8Radio functions. The VX8DRadio functions attempt to generate a Settings tab for the VX-8R which causes errors due to the fact that the memory layout for the APRS settings in the vx8.py driver is for VX-8DR and VX-8GE only.</p>

[vx8] Fix issue with VX-8R download from radio. Fixes #4883

This patch ensures that the functions from the correct radio class are called when downloading from the radio. This is achieved by defining distinct MODELS for the VX-8R, VX-8DR, and VX-8GE and deleting their VARIANTS. This patch is also accompanied (out-of-band) with test image files for each of the radios.
