Chirp Version:	daily		
Equipment Loan Offered:	No		
Subject:	TDXone TD-6P		
Description			
<p>I recently bought a TDXone TD-6P radio, which is an amazing item, with a good graphic screen yet very compact. Unfortunately, I was not able to program it with CHIRP. I tried lots of possible vendor/model combinations, but none worked out. At the same time I have heard that it could be programmed via Baofeng software. It would be nice to have this model added.</p> <p>I am running CHIRP daily-20170406 on Darwin SM-MBP.local 16.7.0 Darwin Kernel Version 16.7.0: Thu Jun 15 17:36:27 PDT 2017; root:xnu-3789.70.16~2/RELEASE_X86_64 x86_64 (Python 2.7.13) — installed from homebrew.</p> <p>P.S. I think I can make an effort to add support for this radio, but I am new to CHIRP and not sure how such a development should be done.</p>

- Status changed from New to Feedback
- Target version set to chirp-daily
- Chirp Version changed from 0.4.0 to daily

Sergey, please review the Wiki: [[Developers]].

It explains the things you need to follow when developing for Chirp. Thanks!
