| <b>Model affected:</b>   | BF-888s   |                  |                   |
| <b>Platform:</b>   | Windows   |                  |                   |
| <b>Subject:</b>  | BF-888 - try the file called ZT-V68.zip that is on the CD with the Prolific Cable |                  |                   |
| <b>Description</b>   |   |                  |                   |
| <p>There is a file called ZT-V68.zip on the little CD that comes with the Prolific cable. Unzip ZT-V68.zip into a folder and install it and it will put an icon on your desktop (it's safe, I've scanned it).</p> <p>1-First of all, use Chirp to upload an English image into a Chinese radio that speaks Chinese.<br/>2-Load ZT-V68, match the comport and hit Program to read from radio. It will say Reading Completed, hit OK.<br/>3-Then hit Edit then Function Setting. Change language to English and hit OK.<br/>4-Go to Program and write the image to the radio, hit OK then Cancel.<br/>5-Close the ZT-v68 program.<br/>6-Go to File and select Save AS. Save the image to an empty folder and name it something you will remember.<br/>7-It will then speak in English. Even if you load any Chinese speaking images afterwards, when you go back to this image it will always speak in English.<br/>8-I have spend the last several hours doing this and testing Chinese speaking images in between this image.<br/>9-It only takes a few minutes to do, but it's better than sending them back and probably getting another Chinese radio.<br/>10-I read several articles that said Baofeng, BF-888, UV-5R and others have been swamped with cheap Chinese clones. Lots of people are sending them back.</p> <p>I am not a programmer, but if the ZT file can change an image to English, there should be a way to do it in Chirp. (not criticizing the programmers).</p> |   |                  |                   |
