

CHIRP - Bug # 7199

Status:	Closed	Priority:	Normal
Author:	Leland Scott	Category:	
Created:	10/31/2019	Assignee:	
Updated:	12/04/2019	Due date:	
Chirp Version:	daily		
Model affected:	TK-370-1 and variations		
Platform:	Windows		
Subject:	Frequency Entry Error Checking Bug		
Description			
<p>Older versions allowed a frequency entry of 462.5625 MHz (GMRS channel 1) as an example but now throws an error saying a tuning step of 12.5 KHz is not supported in version "CHIRP daily-20191018" when I tried it.</p> <p>The technical manual for the radio clearly shows tuning steps of 5 KHz and 6.25 KHz are supported. See uploaded file. The 6.25 KHz step size allows EXACT frequency entry of the sample shown above. This should not be generating an error for frequency entries like this. Any frequency that is an exact multiple of 5 KHz or 6.25 KHz are valid entries that will work when programmed into the radio.</p>
