<b>Equipment Loan Offered:</b>	No		
<b>Subject:</b>	Kenwood TK-3201 Pro Talk		
<b>Description</b>			
<p>Hi everyone !</p> <p>Please forgive me if i miswrite, but English is not my main language. Don't hesitate to correct me, it will be a pleasure for me to improve my skill.</p> <p>I allow me to write to ask if it's possible to add a new (old in fact) model of radio to Chirp ?</p> <p>I bought one radio from Baofeng, an UV-5R, and one from Puxing, a PX888K to complete my set of radios initially composed by a pair of Kenwood Pro Talk TK-3201, bought a long time ago (about more than 15 years) in a "real" shop (on the street).</p> <p>And for configuring my new radios to work together with the olds, i tried Chirp (excellent app !!! Once more congrats to you all developpers ;-)).</p> <p>I had no problems with the UV-5R, i had 2 with the PX888K (i submitted them here : <a href="https://chirp.danplanet.com/issues/7279">https://chirp.danplanet.com/issues/7279</a>), but i squarely couldn't not read config from TK-3201 because this radio is just not (yet ;-) ) supported by Chirp.</p> <p>The vendor didn't want to give me the frequencies and the CTCSS/DCS set in MY radios, and said me that the Baofeng and Puxing radios won't be compatible whith mines... Bullshit of course because they obviously are if you set them up correctly. This was pathetic, but i guess business is business... But it's not the problem.</p> <p>So i had to use "the hard way" to identify the frequencies and the CTCSS/DCS used by my first radios (with the scanning functions of my new radios), and after a long time and some shouts, that was done.</p> <p>But i would like to confirm what i found and be able to set up my old radios in my way, as i want.</p> <p>Do you think it's possible to add this radio (Kenwood Pro Talk TK-3201) to Chirp ?</p> <p>With my best regards,</p> <p>Ti'R</p>
