CHIRP - Bug # 9329

Status:	Closed	Priority:	Normal
Author:	Les Dawes	Category:	
Created:	08/28/2021	Assignee:	
Updated:	04/16/2022	Due date:	
Chirp Version:	daily	•	
Model affected:	Chirp files		
Platform:	All		
Subject:	New version will not load .chirp files		

Description

One of the changes made since the 20210814 version has caused Chirp to no longer create or load a .chirp file. Version 20210814 works, version 20210826 does not. When trying to open a .chirp file from the windows pc it wants to know the last radio that was used. That is not possible with a shared file. Chirp will also no longer create a .chirp file. The option does not appear to be there anymore. I have reloaded the 0814 version and everything works fine. I am running windows 10 latest version all updated. We use the .chirp files for a common set of frequencies within out club. About 113 users. That format is perfect as it can be imported into any radio that Chirp will read. We love it.

- Status changed from New to Feedback

The ability to export .chirp files was removed back in 2016 when the file format was deprecated. It is no longer a supported file format in CHIRP.

I would suggest that you try the .CSV file format. Better yet, learn how to import CHIRP Radio Images (*.img) files saved as a "master" file in order to populate radio channels in radios of other Vendors and Models. That is what I do. I have a "master" UV-5R image that I use to load channels into nearly all of my other analog dual-band radios no matter the Vendor or Model.

Visit $\underline{\text{this page}}$ to see the process explained in greater detail.

- Priority changed from High to Normal
- Model affected changed from (All models) to Chirp files

My recommendation also is to use the old Chirp version to export CSV files.

These will still import fine on new versions of Chirp.

Our emcomm group juggles several hundred channels on multiple radio types that way.
