===== Run with sources =====

i think i don't understand how use a

===== Install via ppa =====

Success

sudo add-apt-repository ppa:dansmith/chirp-snapshots ; sudo apt update ; sudo apt install chirp-daily ; sudo chirpw

(i run chirpw on root because without it can't acces to radio)

===== find the radio =====

Double fails (why i'm here)

with the lasted daily version

and with the script from

https://chirp.danplanet.com/attachments/download/5613/20200522_anytone778uv.py

the windows become red but not RT95 on list

History**#1 - 01/16/2022 10:54 am - Bernhard Hailer**

- Status changed from New to Closed

- Priority changed from Urgent to Normal

- Model affected changed from RT-95 to Retevis RT-95

#Duplicates ticket #9547, which also lists a likely solution for your problem.

#2 - 01/19/2022 02:05 pm - Dae k

excuse me, but how does this solve my flatpak problem?

or with the sources ?

#3 - 01/19/2022 02:21 pm - Jim Unroe

You most likely don't have the flatpak fully installed. In addition to that, the RT95 and its variants require the addition of the Python future package. Without "future", the models that are dependent on it will not be listed in CHIRP.

the specific problem with RT-95 has been solved in another post

what I would like to know is what I did not understand or did not execute correctly to use flatpak or use chirp from the zip

For linux distributions derived from Ubuntu prior to 20.04 (which would include you Lubuntu 18.04.6) you do not need to use the flatpak. You can add the PPA as described on the [Running Under Linux](#) wiki page.

Linux distributions derived from Ubuntu 20.04 and later have dropped Python 2.7 and other CHIRP dependencies. So to run CHIRP you would either have to add Python 2.7 and track down the remaining dependencies. The flatpak was created to eliminate the need to do this. A properly installed flatpak brings along everything needed except the future package.

The "win32.zip" build is for Windows. The "tar.gz" build is for linux and has the same requirements as mentioned above.

#6 - 01/19/2022 06:12 pm - Dae k

i have python2.7 and 3.8 on my distrib,
but i recive the message "Error: Error deploying: Failed to read commit "
or "no free space" but i have 20gio free ./ very strange

and i don't realy understand how use tar.gz after unzip it.
